

TanWeru is a technology company based in Nairobi that designs, builds and supports software, AI and automation, and data systems for enterprises and public institutions, from discovery and design to long-term support.

BASED IN Nairobi, Kenya	FOUNDED 2026	FOUNDERS Ben Waweru Julian Tanui	WEBSITE tanweru.com
-----------------------------------	------------------------	---	-------------------------------

CORE CAPABILITIES

01

Software and web development

Customer and citizen portals, internal systems and mobile-first web apps, built to stay fast on everyday devices and networks.

- Web and mobile applications
- APIs and system integration
- Payments and messaging integrations
- Accessible, mobile-first front ends

02

AI and automation

Practical automation for the paperwork that slows teams down: document intake, triage, approvals and reporting, with people kept in the loop.

- Document processing and extraction
- Workflow and approval automation
- LLM assistants grounded in your own data
- Human review and audit trails

03

IT consulting and digital transformation

Independent advice on what to build, buy or retire, then a phased plan your team and budget can actually carry.

- Technology assessments and roadmaps
- Cloud and legacy migration planning
- Vendor and platform selection
- Process redesign before automation

04

Data and analytics

Dashboards and data pipelines that turn scattered spreadsheets and systems into figures leaders can trust and act on.

- Data pipelines and warehousing
- Dashboards and performance reporting
- Data governance and quality
- Reporting automation

HOW WE DIFFER

Security first

Sensitive data is protected by design: least-privilege access, encryption in transit and at rest, audit logs, and data protection practices built in from the first design.

Built to scale

Fast, resilient systems that hold up on everyday devices and networks today, and grow with demand without a rebuild.

Tailored, not templated

Every organisation works differently. We fit the system to your mandate, workflows and existing tools instead of forcing a one-size-fits-all product.

Collaborative delivery

We work alongside your internal teams with written scopes, demonstrable milestones and full handover, so decisions are on record and nothing is a black box.

WHO WE SERVE

FOR ENTERPRISE

Private organisations

Banks, insurers, health providers, agribusiness, NGOs and growing companies that need technology to move faster and cost less to run.

- Faster time to market for new products and channels
- Integrations with payments (M-Pesa and others), ERPs, CRMs and core systems
- Automation that removes manual, repetitive work
- Reliable support with agreed response times

How we engage: Fixed-scope projects, time-and-materials for evolving work, or a support retainer after launch.

FOR GOVERNMENT

Public institutions

Ministries, agencies, local governments and public bodies modernising how they serve people: replacing paper and legacy systems with dependable digital services.

- Citizen-facing services that work on any phone
- Faster processing with automated document checks
- Data protection and audit trails built in
- Transparent milestones, reporting and handover

How we engage: Phased modernisation programmes, starting with an assessment and a roadmap, then delivery in milestones with training and support.

DELIVERY APPROACH

01

Discover

We start with your goals, users and constraints: budget, timelines, existing systems and regulatory obligations. You get a written scope, not a slide deck.

02

Design

Architecture, data flows and interface prototypes are agreed before code is written, so stakeholders sign off on something concrete.

03

Build

Delivery in short, demonstrable milestones with tested releases, documentation and regular progress reports you can share upwards.

04

Support

Handover, training and an agreed support window after launch, with clear response times and a path to grow the system over time.

SECTORS

Enterprise

Finance

Health

Agriculture

Government and public sector

WHERE WE OPERATE

Nairobi · On site where it matters · Regional and international.

We travel for discovery workshops, training and go-live, and work remotely the rest of the time.

TanWeru is a newly formed company. This statement lists only verified information: no past clients, projects or certifications are claimed. Registration and compliance documents will be shared on request as soon as they are issued. More at tanweru.com.
